HIGH SPEED GROUND TRANSPORTATION: FUNDS NEED TO BE FOCUSED UNDER PROPOSED LEGISLATION: T-RCED-93-45

BiblioGov. Paperback. Book Condition: New. This item is printed on demand. Paperback. 24 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. GAO discussed the federal governments allocation of resources for the development of high-speed ground transportation (HSGT) in the United States. GAO noted that: (1) the administration has proposed legislation and requested 1.3 billion to foster high-speed rail technology development and designate high-speed rail corridors; (2) the cost of implementing high-speed rail programs increases with the proposed level of speed desired; (3) HSGT options include improving existing rail rights-of-way, which would increase rail speed to 150 miles per hour (mph) and cost between 500 million and 2.6 billion, developing a high-speed rail system similar to Frances system, which would increase rail speed to 200 mph and cost nearly 4 billion, or developing a Maglev system which would permit speeds of up to 250 mph and cost 12 billion; (4) the Amtrak Northeast Corridor Improvement Program is the only rail improvement program that has been federally funded and implemented; (5) few HSGT projects have been privately developed or funded because of the risks involving ridership levels and rates of return; (6) the administration has proposed legislation that would allow the Department of Transportation to spend 140 million in 1994 and a total of 1.3 billion between 1994 and 1998 for high-speed rail corridor and technology development, but the legislation does not include a development schedule or limit the number of projects; and (7) a strategic approach and accurate ridership data are needed to contain the potentially high costs of HSGT development. This item ships from La Vergne, TN. Paperback.
